The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous moiety, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous moiety is different from any of the fusion proteins CIIH6FXTN123, H6FXTN123, H6FXTN12, H6FXTN12 (AAM94261 to AAM94264). The TTSE can be used for the construction of conjugates with heterologous moietys and still activatable substance, an enzyme, a radioactive moiety, a cytokine, a non-proteinaceous polymer, a photo cross-linking agent, or a group facilitating conjugation of the monomer polypeptide construct to a target. They can be used as vehicles for generating chimeric artificial antibodies having preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for trangeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to a cell or tissue or for delivering an imaging or transmiting and a religion or processed to a religion of the specific and a time of a religion or processed to a religion of the specific and a time of a religion or processed to a religion of the specific and a time of a religion or processed to a religion of the material or the mate antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a human tetranectin sequence from which the TTSE can be New monomer polypeptide constructs for diagnosis and therapy comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional activity 100.0%; Score 172; DB 20; 100.0%; Pred. cDNA encoding human tetranectin (full sequence given in AAR60521) was PCR amplified cDNA was linked to a sequence encoding the Factor-xa cleavage site (given in AAR60503), subcloned in vector pT7H6 so that it was linked to a hexabilistidine-encoding sequence and expressed in E. coli BL21. The fusion protein was purified on an Ni2+-activated WTR-agarose column. A cyclic procedure was used to obtain correctly folded recombinant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; sheep; pig; cow; fruit fly; yeast; hamster; macaque; horse;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous molety, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous molety is different from any of the fusion proteins CIIH6FXTN123, H6FXTN123, H6FXTN12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a H6EXTN123 fusion protein sequence. The specification claims that the heterologous moiety to which the TTSEs of the invention are linked to is specifically different from the present fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New monomer polypeptide constructs for diagnosis and therapy -
comprise a tetranectin trimerising structural element covalently
linked to at least one heterologous moiety for providing functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

                                                                                                                                                                    The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat., horse, ow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural clement (TTSE) which is covalently linked to at least one heterologous moiety, the TTSE baing capable of forming a stable complex with 2 other moiety, the TTSE baing capable of forming a stable complex with 2 other any of the fusion proteins CIIH6FXTN123, H6FXTN123, H6FXTN12, H6FXTN12 GAM94261 to AAM94261 to AAM94264). The TTSE can be used for the construction of conjugates with heterologous moietys and such as a radioactive moiety, a cytokine, a non-proteinaceous polymer, a photo cross-linking agent, or a group facilitating conjugation of the monomer polypeptide construct to a target. They can be used as vehicles for sesembling antibody fragments into oligomeric or multivalent constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to a city of the support of an entity of the material for transfection or infection of the specific a cell or tissue or for delivering an imaging or transferd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a CIHEFXTAN123 fusion protein sequence. The specification claims that the heterologous molety to which the TTSEs of the invention are linked to is specifically different from the present fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
New monomer polypeptide constructs for diagnosis and therapy - comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Plasminogen activation; clot lysis; fibrinolysis; tissue growth; tissue repair; haemostasis; neoplasia therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 228;

                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                Tetranectin is comprised of four polypeptide chains having the formula shown in AAP60098. Tetranectin stimulates and controls the plasminogen activation resulting in a higher rate of clot lysis or fibrinolysis, esp. in the presence of blood platelets and in the presence of a complex fibrin clot from blood. It stimulates and controls the plasminogen activation in the absence of fibrin but in the presence of a cofactor such as polylysine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New monomer polypeptide constructs for diagnosis and therapy comprise a tetranectin trimerising structural element covalently
                                                                                                                                                                                                                                                                                       .;

antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a human tetranectin polypeptide fragment. The encoding nucleic acid sequence was amplified by PCR from the plasmid clone pT7H6FXTN123. This is used in the construction of E. coli expression vectors for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                counsider comprises at teast one termineration. Controlled to Comprise at teast one between the controlled to the TTSE, which is covalently linked to at least one heterologous moiety, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous moiety is different from any of the fusion proteins CIH6FXTN123, H6FXTN123, H7FXTN123, H7FX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to a cell or tissue or for delivering an imaging or toxin-conjugated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Trimeric polypeptide; tetranectin trimerising structural element; TTSE; fusion protein; ligand binding structure; toxin; enzyme; cytokine; artificial antibody; pharmacokinetic; pharmadynamic; gene therapy; transfection; imaging; tumur; human; tetranectin.
                                                                                                                                                                                                                                                                                                                      The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

```
The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein caniform. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural molety, the TYEE being capable of forming a stable complex with 2 other molety, the TYEE being capable of forming a stable complex with 2 other any of the fusion proteins CIH6FWAIN123, H6FWAIN12, H6FWAIN13, H
                                                                                                                                                                                                                                    New monomer polypeptide constructs for diagnosis and therapy - Comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional

The present sequence represents a human tetranectin polypeptide fragment. The encoding nuclei acid sequence was amplified by PCR from the plasmid clone pT7H6FXTM123. This is used in the construction of E. coli expression vectors for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Trimeric polypeptide; tetranectin trimerising structural element; TTSE;

```
The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural elements at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous moiety, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous moiety is different from any of the fusion proteins CIHGEYTN123, HEYTN123, HEYTN13, HEYTN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibody to a tumour. They can also be used for prevention of treating a disease or for diagnosis. The TYSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a H6FXTN12 fusion protein sequence. The specification claims that the heterologous moiety to which the TYSEs of the invention are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 that the heterologous moiety to which the TTSEs of the invention are inked to is specifically different from the present fusion protein
fusion protein; ligand binding structure; toxin; enzyme; cytokine; artificial antibody; pharmacokinetic; pharmadynamic; gene therapy; transfection; imaging; tumour; human; tetranectin; H6FXTN12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New monomer polypeptide constructs for diagnosis and therapy

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous moiety, the TTSE being capable of forming a stable complex with 2 other TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous moiety is different from any of the fusion proteins CIHEKTWI23, HEKTWI23, HEKTWI23 (AAW94261 to AAW94264). The TTSE can be used for the construction of conjugates with heterologous moieties such as a ligand binding structure, a toxin, a detectable label, an in situ activatable substance, an enzyme, a radioactive mobiety, a cytckine, a non-proteinaceous polymer, a photo cross-linking agent, or a group facilitating conjugation of the monem polypeptide construct to a target. They can be used as vehicles for assembling antibody fragments into oligomeric or multivalent centities for generating chimeric artificial antibodies having a protein and for target the therapy involving solorities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TYSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a H6FXtripb fusion protein sequence encoded by the plasmid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    population of cells. They can also be used for delivering a substance to a cell or tissue or for delivering an imaging or toxin-conjugated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             69 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural construct comprise at least one tetranectin trimerising structural moiety, the TTSE being capable of forming a stable complex with 2 other any of the fusion proteins CIHERYANI3, HERYANI3, HERYANI2, HERYANI2, CAMA94261 to AAM94264). The TTSE can be used for the construction of conjugates with heterologous moieties such as a ligand binding conjugates with heterologous moieties such as a ligand binding at a radioactive moiety, a cytokine, a non-proteinaceous polymer, a photo cross-linking agent, or a group facilitating conjugation of the monomer polypeptide construct to a target. They can be used as vehicles for assembling antibody fragments into oligomeric or multivalent mannity and an entity and entity and entity and an entity and an entity and an entity and entit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to a cell or tissue or for delivering an imaging or toxin-conjugated antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous constructs, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the provise that the heterologous moiety is different from any of the fusion proteins CIIH6FXTN123, H6FXTN123, H6FXTN12, H6FXTN123, GAN94261 to AAN94264). The TTSE can be used for the construction of conjugates with heterologous moieties such as a ligand binding structure, a texin, a detectable label, an in situ activatable substance, an enaryme, a radioactive moiety, a cytokine, a non-proteinaceous polymer, a photo cross-linking agent, or a group facilitating conjugation of the monomer polypeptide construct to a target. They can be used as vehicles for assembling antibody fragments into eligomeric or multivalent
act as a vehicle for a wide variety of conjugates. The present sequence represents a H6FXLripB-UB (ubiquitin) fusion protein sequence encoded by the plasmid pH6FXLripB-UB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Trimeric polypeptide; tetranectin trimerising structural element; TTSE; fusion protein; ligand binding structure; toxin; enzyme; cytokine; artificial antibody; pharmacokinetic; pharmadynamic; gene therapy; transfection; imaging; tumour; human; tetranectin; CEA6.
                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New monomer polypeptide constructs for diagnosis and therapy - comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional
                                                                                                                                                           .;

preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to an tibody to a tumour. They can also be used for prevention or treating a cell or tissue or for delivering an imaging or toxin-conjugated antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence

                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                           ò
```

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous moiety, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous moiety is different from

linked to at least one heterologous moiety for providing functional New monomer polypeptide constructs for diagnosis and therapy comprise a tetranectin trimerising structural element covalently

any of the fusion proteins CIIH6FXTN123, H6FXTN123, H6FXTN12, H6FXTN12

(AAM94261 to AAM94264). The TTSE can be used for the construction of conjugates with heterologous moleties such as a ligand binding such as a ligand binding and binding activated label, an in stu activatable substance, an enzyme, a radioactive moiety, a cytokine, a non-proteinaceous polymer, a photo cross-linking agent, or a group facilitating conjugation of the monomer polypeptide construct to a target. They can be used as vehicles for assembling antibody fragments into oligomeric or multivalent entities for generating chimeric artificial antibodies having preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific conjutation of cells. They can also be used for delivering a substance to a cell or tissue or for delivering an imaging or toxin-conjugated antibody to a tumour. They can also be used for prevention or treating a cell or tissue or for delivering an imaging or toxin-conjugated antibody to a tumour. They can also be used for prevention or treating a classes or for diagnosis. The TTSE provides a stable structure which can a task as a weblice for a wide variately of conjugates. The presents a HERYLINGENOUS.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 4
